

Serieninstandsetzung

Your competent outsourcing partner

- Repair of many electronic assemblies according to standardized repair procedures with documentation
- A larger repair capacity is possible for the same or similar orders
- **Target group:** machine manufacturers, service companies and distributors

First, we want to understand your problem

Drive and power electronics are often discontinued prematurely. This can mean that you are forced to deliver your customers a replacement. We will help you with the bottleneck analysis and **find an optimal solution together.**

Our services

- Preventive repair at component level
- Organization of spare parts
- Development of test stations and procedures
- If necessary, new development or re-engineering of modules or complete devices

Access to years of experience, specialists and equipment
