

We help you with problems about spindle and servo motors

We help you with problems about spindle and servo motors

Your machine manufacturer doesn't provide support any more?
Then you have found the right partner in us!

What you can expect with us

After a thorough diagnosis you can choose one of our solutions. The standard repair service contains for example an overhaul or exchange of encoders, bearings and breaks.

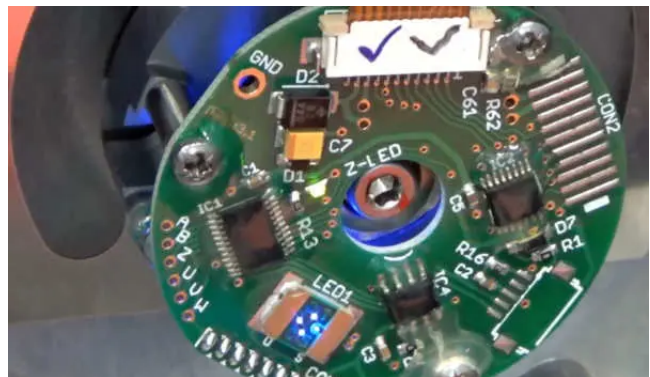

When the repair is done we test your motor close to production conditions with our loading test stands. In the end you receive a fully operational motor again.

In-house RE-Engineering division

We can help even when there are very special requirements. Our development team builds complete component parts on request. So for example we have developed for a series of motors an own RE-engineered encoder as retrofit.

Lower prices and faster repair times

We are always working to improve our service. After moving to our new building, we have completely modernized our motor workshop. You can expect faster processing times and lower prices now.

Our retrofit encoder
