- SGMG-02, 05, 09, 13, 20, 30, 44, 60, 75. Motors between 200 and 400 Volt between 100 Watt and 7 KW SGMG-09A2AB, SGMG-13A2ABC, SGMG-20V2AB, SGMG-30VSA, SGMG-30V2AAB SGMG-30VSA, SGMG-55ASAB, SGMG-44V2ABB
- The following encoders and brakes can be installed in these motors: UTMAH-B15ASB, UTOPH-81AWF, UTOPH-81AVF, UTOPH-40AVM SBR-119V-45B, SBR-112V-200B, RNB4.4K-04

For better quality control we have several test stations for Yaskawa motors

- Extensive test stations
- Inhouse-repair services
- Output test runs
- Repair at component level by qualified personnel
- Use of high-quality components, i.e. no cheap imitations

Repair service at a glance

- Replacing the ball bearings
- Exchange of encoder/encoder system
- If necessary repair of the winding and balancing
- The motor is tested on a special test system and under realistic conditions
- Your motor is thoroughly cleaned (washed out), sandblasted and repainted
- Intensive cleaning of the winding and new sealing
- New adjustment of the encoder/encoder system
- Plug repair/replacement if necessary
- Testing according to VDE standards

The motors are checked for insulation, breakdown and vibration after repair
